

# Automatic infeed system

**Model ORN6/ORN8**

Apple

Combined with the PL6 or PL8 apple peeling machine, this infeed system creates a fully automatic apple processing line. The apples are collected in a water tank. From this tank, the apples are led to an orientation table. On this orientation table, the apples are positioned with the stem or the flower upwards and automatically transported further to the peeling machine.

The electrical cabinet of the feeder is interfaced with the electrical cabinet of the connected peeler for synchronisation of the mechanisms.

The whole structure is positioned on a sliding carriage for easy access to the peeler during maintenance.
